

# Congenital Adrenal Hyperplasia (CAH) Research Study

Are you a carrier of or living with congenital adrenal hyperplasia?

Your participation in this research project may help others through the development of new and improved carrier screening tests for individuals who would like testing. Only a single visit is expected for participation in this study.

You may qualify to participate if you:

Are male or female, any age

Are a carrier of 21-OHD congenital adrenal hyperplasia (with results from genetic testing)

Are living with 21-OHD congenital adrenal hyperplasia (with results from genetic testing)

For your participation, you will provide:

- Information about your demographics, medical history/current medical conditions, and list of current medications you are taking
- A copy of your genetic testing results showing your 21-OHD CAH carrier or affected status
- Samples required for the study:
  - 20 mL (a little over 1 tablespoon) of whole blood and a buccal (cheek) swab or mouthwash sample

*You will receive compensation for your participation in the study upon completion of all study-related activities.*
